Join Dr. Michael Desvigne for an interactive educational webinar exploring the evolving role of meshed human dermis in complex reconstruction. Drawing on his clinical experience with SomaGen® Meshed, Dr. Desvigne will share practical insights, challenging cases, and the science behind the tissue.

Program Highlights

- The clinical advantages of meshed human dermis in reconstructive procedures
- Challenging case presentations demonstrating surgical technique and patient outcomes
- Considerations for tissue selection based on reconstructive goals and defect complexity
- Live Q&A with Dr. Michael Desvigne

Who Should Attend

This program is designed for plastic and reconstructive surgeons interested in the latest advancements in biologic matrices for complex reconstruction.
